EDUCATION

MLR Institute of Technology, Hyderabad, Telangana, India
B.Tech in Computer Science Engineering | Expected May 2028

EXPERIENCE

Founder & CEO, Evalyze Labs

Mar 2026 – Present

- Founded Evalyze Labs, an AI research and benchmarking lab focused on evaluating the security and reliability of autonomous AI agents.
- Developed AgentShield Bench and automated evaluation pipelines for LLMs and agentic systems, contributing research on AI safety, prompt injection attacks, and benchmark development.

Machine Learning Intern, FlyRank AI

Jun 2026 – Present

- Developing and evaluating AI systems using machine learning, large language models, retrieval pipelines, and benchmark-driven validation.
- Collaborating on scalable AI product development, experimentation, and model performance optimization.

Software Engineer, Mentiora

Dec 2025 – Jun 2026

- Built and shipped production features using React, TypeScript, and Supabase in a full-stack development environment.
- Implemented authentication, session management, and backend functionality while collaborating on API design, debugging, and Git-based workflows.

Open Source Contributor

Nov 2025 – Present

- Contributed to adk-go, LinkedIn Cruise Control, and Observer Patch Holography.
 - Submitted code improvements, bug fixes, and performance enhancements across distributed systems and research software.
-

RESEARCH & PUBLICATIONS

AgentShield Bench: Evaluating Security and Reliability in Autonomous AI Agents 2026

- Introduced a benchmark framework for evaluating prompt injection resilience, tool misuse, and agent safety failures.
- Developed structured evaluation methodologies for autonomous AI agents.

AgentShield Bench v2: Expanded Evaluation of Autonomous Agent Security 2026

- Extended AgentShield Bench with new attack scenarios, evaluation metrics, and comparative analyses across multiple AI models.
- Advanced reproducible benchmarking methodologies for measuring agent robustness, security, and reliability.

Evaluating Prompt Injection Vulnerabilities in AI Agents 2026

- Investigated prompt injection vulnerabilities in AI agents, introducing a taxonomy covering role override, hidden text attacks, multi-turn manipulation, and tool misuse.
 - Designed an evaluation framework and benchmark methodology for measuring AI agent security, resilience, and defense effectiveness against adversarial prompts.
-

PROJECTS

RoomRoll – Virtual Tabletop RPG Platform

- Built RoomRoll, a full-stack virtual tabletop platform for tabletop RPG communities using React, TypeScript, and Firebase.
- Engineered real-time multiplayer collaboration, authentication, and campaign management features while leading product architecture and development.

Forge – AI-Powered Developer Terminal Platform

- Developed Forge, an AI-powered terminal platform integrating natural language interaction with traditional CLI workflows using Node.js, Rust, and Ink.
- Built real-time task monitoring, background execution, and intelligent command orchestration to streamline developer workflows.

World Monitor – Real-Time Global Intelligence Dashboard

- Built a real-time global intelligence platform using Next.js and FastAPI to aggregate and visualize geopolitical, economic, and infrastructure data.
- Developed geospatial dashboards and monitoring pipelines for global event tracking and trend analysis.

Smart Medication Management System for Elderly Care

- Designed an IoT-based medication adherence system for elderly users, incorporating reminder workflows, caregiver notifications, and accessibility-focused features.
 - Led a multidisciplinary team in developing the solution, reaching the final round of Innovation Challenge 2025.
-

RESEARCH INTERESTS

- AI Safety
 - Autonomous AI Agents
 - Agent Evaluation & Benchmarking
 - LLM Security
 - Trustworthy AI Systems
 - Multi-Agent Systems
-

TECHNICAL SKILLS

Languages: Python, Java, C, C++, TypeScript, Rust, JavaScript

Frontend: React, HTML, CSS

AI & Machine Learning: Neural Networks, Deep Learning, Agentic Systems, AI Reliability, Model Evaluation, LLM Security, and Benchmark Development

Backend & Databases: Firebase, Supabase

Data & Machine Learning: Pandas, NumPy, Matplotlib
